FitXpress

Unlock Deeper Engagement and Motivation with Personalized 3D Body Insights

Seamless API/SDK Integration for Health, Fitness, and Wellness Platforms

Enhance Health & Fitness Personalization through AI-Powered Body Data Insights

- Higher ARPU
- Engagement
- Retention

FitXpress enhances your customers fitness and wellness journey offering unparalleled insights into their body composition and body transformation driving acquisition and retention from only two photos.

Core Body Measurements

Accurate 3D model

Track Body Changes

Proven AI Technology That Delivers Verified Body Data in Seconds

AI-trained on 9+ years of real-world body data ensures verified, fraud-proof weight tracking with just two photos.

1

Two photos are taken with any **smartphone camera** on any background, fully clothed

2

Computer vision algorithms detect the human body under the clothes. **Clothing Detection AI** flags loose clothing to eliminate inaccurate scans

3

Statistical modeling and 3D matching algorithms accurately create a **3D body model**

4

BMI, BMR, fat %, Lean & fat body mass, and 80+ body measurements are calculated from the model- all in under 45 seconds

Body shape segmentation

Measurements

**We generate over 80 measurements
from a single scan**

Circumference Measurements

- Ankle girth
- Abdomen girth
- Armscye girth
- Bust girth
- Calf girth
- Elbow girth
- Forearm girth flexed
- Hip girth
- Knee girth
- Lower Waist
- Mid thigh girth
- Middle Waist
- Neck girth
- Neck base girth
- Neck girth relaxed
- Overarm girth
- Pant Waist
- Thigh 1' below the crotch
- Thigh girth
- Upper Chest girth
- Under Bust girth
- Upper Arm girth
- Upper Hip girth
- Upper Bicep girth
- Waist girth
- Wrist girth

Linear Measurements

- Abdomen to Upper Knee Length
- Across Back Width
- Across Back Shoulder Width
- Axilla to Waist Side Length
- Back Crotch Length
- Back Neck Point to 1.5" past the Wrist point
- Back Neck Point to Waist
- Back Neck Height
- Back Neck to Hip Length
- Back Neck Point to Wrist Length
- Back Shoulder Width
- Bust Height
- Chest Width
- Front Crotch Length
- Front Shoulder Width
- Hip Height
- Inside Crotch Length to Knee
- Inside Leg length
- Inseam from Crotch to Ankle
- Inside Crotch Length to Calf
- Inside Leg Length to 1" above the Floor
- Inside Leg Height
- Inside Crotch Length to Mid Thigh
- Inseam from Crotch to Floor
- Jacket Length
- Neck to upper Hip length
- Outer Arm length
- Shoulder Slope
- Waist to Knee Length
- Upper Hip Height
- Waist Height
- Neck Length
- Upper Hip to Hip Length
- Knee Height
- Lower Arm Length
- Neck base Width
- Neck Front to Waist Length
- Neck Side to Waist Back Length
- Outside Leg length
- Outside Leg Length from Upper Hip Level
- Outer Ankle Height
- Rise
- Side Upper Hip level to Knee
- Side Bust Point to Waist Level
- Side Neck Point to Armpit Front Fold Point
- Side Neck Point to Bust Point
- Side Neck Point to Knee
- Side Neck Point to Upper Hip
- Side Neck Point to Waist Level
- Side Neck Point to Thigh
- Side Waist Level to Ankles
- Shoulder Length
- Straight Body Rise
- Total Crotch Length
- Torso Height
- Underarm Length
- Upper Arm Length
- Upper Hip Breadth
- Upper Knee Girth to Ankle Girth
- Waist Breadth
- Waist Depth
- Waist to Hip Length

Comprehensive Body Measurements & Insights at Your Fingertips

FitXpress delivers 80+ precise body measurements from a 3D model, including Fat %, BMI, BMR, Fat Mass, and Lean Body Mass for comprehensive insights.

Data Foundations and Accuracy

Our AI has been trained on extensive data sets collected over eight years that deliver a high level of accuracy.

FitXpress is our solution that provides essential wellness related body composition data.

Data approach

3DLOOK's body-shape-centric data approach uses its patented AI powered mobile body scanning technology to create a 3D model and over 80 precise body measurements from just two smartphone photos.

Our solution, designed for scalability and flexibility, surpasses traditional hardware body scanners, delivering unparalleled reliability and adaptability.

Location:

US, Europe

Age Range:

16 to 78

Weight Range:

38 kg to 210 kg
(83.77 lbs) to (462.97 lbs)

Height Range:

150 cm to 205 cm
(5 ft 1 in) to (6 ft 9 in)

Essential Data Collected:

- 150,000+ Photographs
- 30,000+ 3D Scans
- 430,000+ Individual Measurements

Gender Distribution:

48% male

52% female

Dataset Generation Protocol

By independently creating our datasets, we have achieved a highly detailed and accurate approach to generating final results, thereby providing extensive and precise body data.

Approach for data collection methodology

Measurement Process: Hardware Scanner

Parameters measured:
86 different parameters per person

Includes measurements in sitting position and during breathing (inhale/exhale)

Allows study of the body in numerous configurations with maximum detail

Cameras used:
4 dynamic cameras

Additional Data Collected:

BMI, BMR, fat fold depth, body muscle, and body fat percentage using scales

Points Collected: over 5 million points for each 3D model

Ensures high accuracy

Preserves edges, shades and textures

Realistically transmits facial expressions, hair, and clothing

Photo Flow Simulation:

34 different photo configurations per user

Variations include distance, angle, slope, lighting

Frictionless Body Data Capture for Users, Instant Insights for Your Business

Realtime Pose Validation ensure an engaging and accurate experience

1

Guided, Error-Proof Photo Capture - Users get instant feedback for optimal scan accuracy
No Training or Equipment Needed - Just a smartphone, front & side photos

2

Results in Under 45 Seconds – No manual review, instant validation

Real-time Pose Detection

Automated Posture Validation for Scan Precision

Our AI based pose validation engine dynamically evaluates body posture using real-time skeletal tracking, ensuring correct scan positioning and reducing error. Face obfuscation is applied automatically to support user privacy.

Accuracy

Limited Information

Factors Influencing Measurement Variability

1. Optimized Pose and Image Quality Factors

- **Consistent posture for precise measurements:** Maintaining a stable body position enhances accuracy, with even small adjustments (e.g., arm placement) being effectively managed by ongoing optimizations.
- **Smart perspective adaptation:** Smartphone cameras use wide-angle lenses, and continuous improvements in image processing ensure precise measurement adjustments, especially in key areas like the underbust, waist, and hips.
- **Enhanced lighting and background adaptability:** Advanced algorithms effectively handle various lighting conditions and backgrounds, with further refinements boosting image analysis accuracy.

2. Continuous Algorithm Advancements for Superior Data Processing

- **AI-Powered Pose Detection:** Live visual guidance, voice, and text prompts ensure correct alignment for accurate scans without retakes.
- **AI-Powered Clothing Detector:** AI-powered model assesses clothing tightness and adjusts the 3D output for more accurate measurements.
- **Enhanced model calibration:** Continuous optimization of algorithmic parameters further sharpens measurement precision.
- **Seamless adaptation to diverse body shapes:** Ongoing model refinements ensure even greater accuracy for individuals with unique body proportions.

Conclusion

Measurement consistency continues to improve with advancements in algorithm accuracy, enhanced user guidance, refined perspective correction techniques, and AI-powered clothing detection. These innovations continue to drive higher precision, ensuring reliable and seamless body measurement and composition solutions.

2025 Accuracy & Repeatability Study Conclusions

3DLOOK's AI-powered body measurement technology demonstrates approximately 96-97% accuracy when compared to manual measurements across all body metrics, with a typical error margin of 1.5 - 2.0 cm.

For repeatability, the technology shows over 95% consistency, with a variance of less than 1 cm across repeated scans, ensuring high stability and reliability across the full range of body measurements.

This data comes from a real-world study utilizing multiple customer scan events, benchmarked against expert manual measurements to assess consistency and precision, ensuring that results are reflective of actual use cases rather than controlled lab conditions.

Ongoing advancements in AI algorithms continue to improve accuracy and reduce variability in real-world applications.

FitXpress Features

Turn Progress Into Motivation with Visual Tracking

Help patients stay motivated with side-by-side 3D progress tracking, showing real, measurable body composition changes over time

Select past scans to compare body composition changes over time

See detailed 3D body changes and key measurements and body composition metrics for informed progress tracking.

Effortless Onboarding for Accurate, Personalized Insights

Simplify data collection with an intuitive onboarding flow that delivers precise body composition and measurement insights—right from day one.

See Your Future Self: Drive Patient Retention with 3D Goal Visualization

Set your goal and see the transformation—instantly.

Motivate users with a personalized, 3D visualization of their body at their goal weight—making progress feel real and achievable.

Choose your goal weight and visualize your future body

Use Cases

Increase revenue by adding 3D scanning to your Premium Plans

Enhanced Value Prop:

- ✓ 3D body scanning offers tailored fitness plans based on precise body measurements and composition making premium upgrades more attractive

Higher Engagement:

- ✓ Frequent updates on body transformation keeps users motivated and consistently using the app

Exclusive Insights:

- ✓ Provide in-depth body data analysis, justifying premium pricing with advanced health insights

Personalized Coaching

- ✓ Leverage body data to provide specific, actionable advice

Drive User **engagement** and **acquisition** with personalized health data

Tailored Health Insights:

- ✓ Provide users with personalized health metrics to help them understand their body composition and make informed fitness and dietary decisions

Enhanced User Motivation:

- ✓ Keep users motivated by making their progress and achievements clear and tangible

Social Sharing and Community Building:

- ✓ Enable users to invite friends and share their progress driving user acquisition through social engagement

Increase Retention with user goals that encourage engagement

Goal Alignment:

- ✓ Use body data to set personalized goals ensuring users stay motivated by achieving their milestones
- ✓ By tracking user's achievements the goals become closer and more attainable
- ✓ Use body scanning data to make real-time adjustments to fitness plans, keeping users on track

Boost Engagement with 3D body and progress visualization

Progress Visualization

- ✓ FitXpress provides visual progress updates keeping users engaged by showing physical transformations
- ✓ Accurate progress tracking provides precise measurements, allowing users to track even the smallest changes in body comp
- ✓ Visual body progress helps users stay motivated by making their achievements more tangible and real

Increase Retention with user goals that encourage engagement

Tailored Exercise Plans:

- ✓ Generate custom exercise plans based on user's personalized body data ensuring workouts are effective and personalized

User Satisfaction:

- ✓ Increase user satisfaction by offering workouts that align with their fitness levels and body goals, increasing adherence and results

Dynamic Adjustments:

- ✓ Continually adapt exercise plans based on user progress and updated body data, keeping routines fresh and challenging

Boost **retention** and **engagement** with body data-based nutrition

Custom Meal Plans:

- ✓ Tailor meal plans to individual needs and goals using body data

Progress Tracking:

- ✓ Monitor body measurement and shape changes relative to dietary intake

Community Recipes:

- ✓ Connect users with similar body data and dietary goals to share and discover personalized recipes

Personalized Coaching

- ✓ Offer tailored nutrition advice and plans based on individual body data, enhancing user engagement and satisfaction

Enhance Community **growth** and **acquisition** with personalized body data

Community Support:

- ✓ Connect users with similar body types and fitness goals to foster connections, driving user acquisition

Personalized Recommendations

- ✓ Suggest specific workouts, dietary plans, and wellness activities based on individual body data, enhancing user satisfaction

Drive Community **engagement** and **retention** with personalized body data

Challenges and Competitions:

- ✓ Create fitness challenges tailored to user's body data enhancing engagement
- ✓ Motivate users to stay active and involved through community events, boosting retention

In-app Community Groups

- ✓ Facilitate sharing of experiences and support among users with similar goals, strengthening community bonds

Enhancing Health and Fitness With 3D Body Data Precision

FitXpress empowers individuals to take ownership of their fitness and wellness journeys and enables platforms to provide ultra-tailored wellness guidance and support.

For users:

- track progress precisely
- stay motivated by seeing your body transformation
- access comprehensive body data instantly

For coaches:

- set accurate fitness goals
- design highly personalized body data based workouts

For businesses:

- create new revenue streams with frequent body data updates offered as premium features or packages
- keep users hooked with interactive 3D body maps
- cultivate loyalty with personalized health insights
- offer recommendations based on precise body data
- leverage body data at scale
- harness the power of aggregate data for market insights

Integration

Integration

Fast, Secure, and Flexible Integration for Scalable Growth

FitXpress integrates seamlessly into your platform with flexible API and SDK options—giving your business control over data, compliance, and user experience. Built for scale, security, and ease of use.

Ensure accurate scans with guided instructions and real-time validation.

Easily embed AI-powered scanning into web and app platforms.

{ api }

API

Customize data outputs, control API limits, and integrate only what you need—without overhauling your system.

**Mobile Camera
SDK (Android)**

**Mobile Camera
SDK (iOS)**

**Camera
SDK (React)**

We strongly recommend integrating our Camera SDK, as it guides users and leads to precise outcomes.

Available now

Data Privacy and Security

We are committed to maintaining the highest security standards and are in the process of enhancing our certifications. Since FitXpress does not provide medical advice, diagnosis, or treatment recommendations, medical device certifications do not apply.

What measures are in place to securely store photos?

✓ Data encryption:

All data is stored with Amazon S3 with mandatory server-side encryption (SSE-S3), ensuring maximum protection of your information.

✓ Data minimization & confidentiality:

We do not process user details or other personal identifiers, ensuring that photos cannot be associated with any specific individual

✓ Security Monitoring:

Our system continuously monitors for and prevents unauthorized access attempts, maintaining data integrity and security at all times.

How do end users request to delete their data?

3DLOOK does not process personal identifiers or contact details that could link photos or data to specific individuals, demonstrating our commitment to user privacy. End-users may exercise their privacy rights by submitting a request regarding the personal data we process through privacy@3dlook.me.

Does 3DLOOK store photos?

Based on your requirements and instructions, photos are permanently removed either immediately after the processing or within 30 days of generating results. When temporary storage is selected, all retained photos are automatically blurred to ensure additional privacy protection. Additionally, end-users' images are never shared with third parties.

Is the user's data encrypted?

- ✓ All data is automatically encrypted both during transmission and at-rest using advanced encryption protocols (TLS and server-side encryption with Amazon S3 managed keys (SSE-S3)).
- ✓ Encryption is enforced by default; storage encryption is always on and cannot be disabled.

Are you HIPAA/GDPR -compliant?

FitXpress maintains HIPAA compliance and follows GDPR principles, with robust safeguards in place to protect user data. We process only the minimal data needed, never link photos to personal identifiers, delete images immediately or within 30 days per client policy, and encrypt all data in transit and at rest with continuous security monitoring.
